

Motion Control System

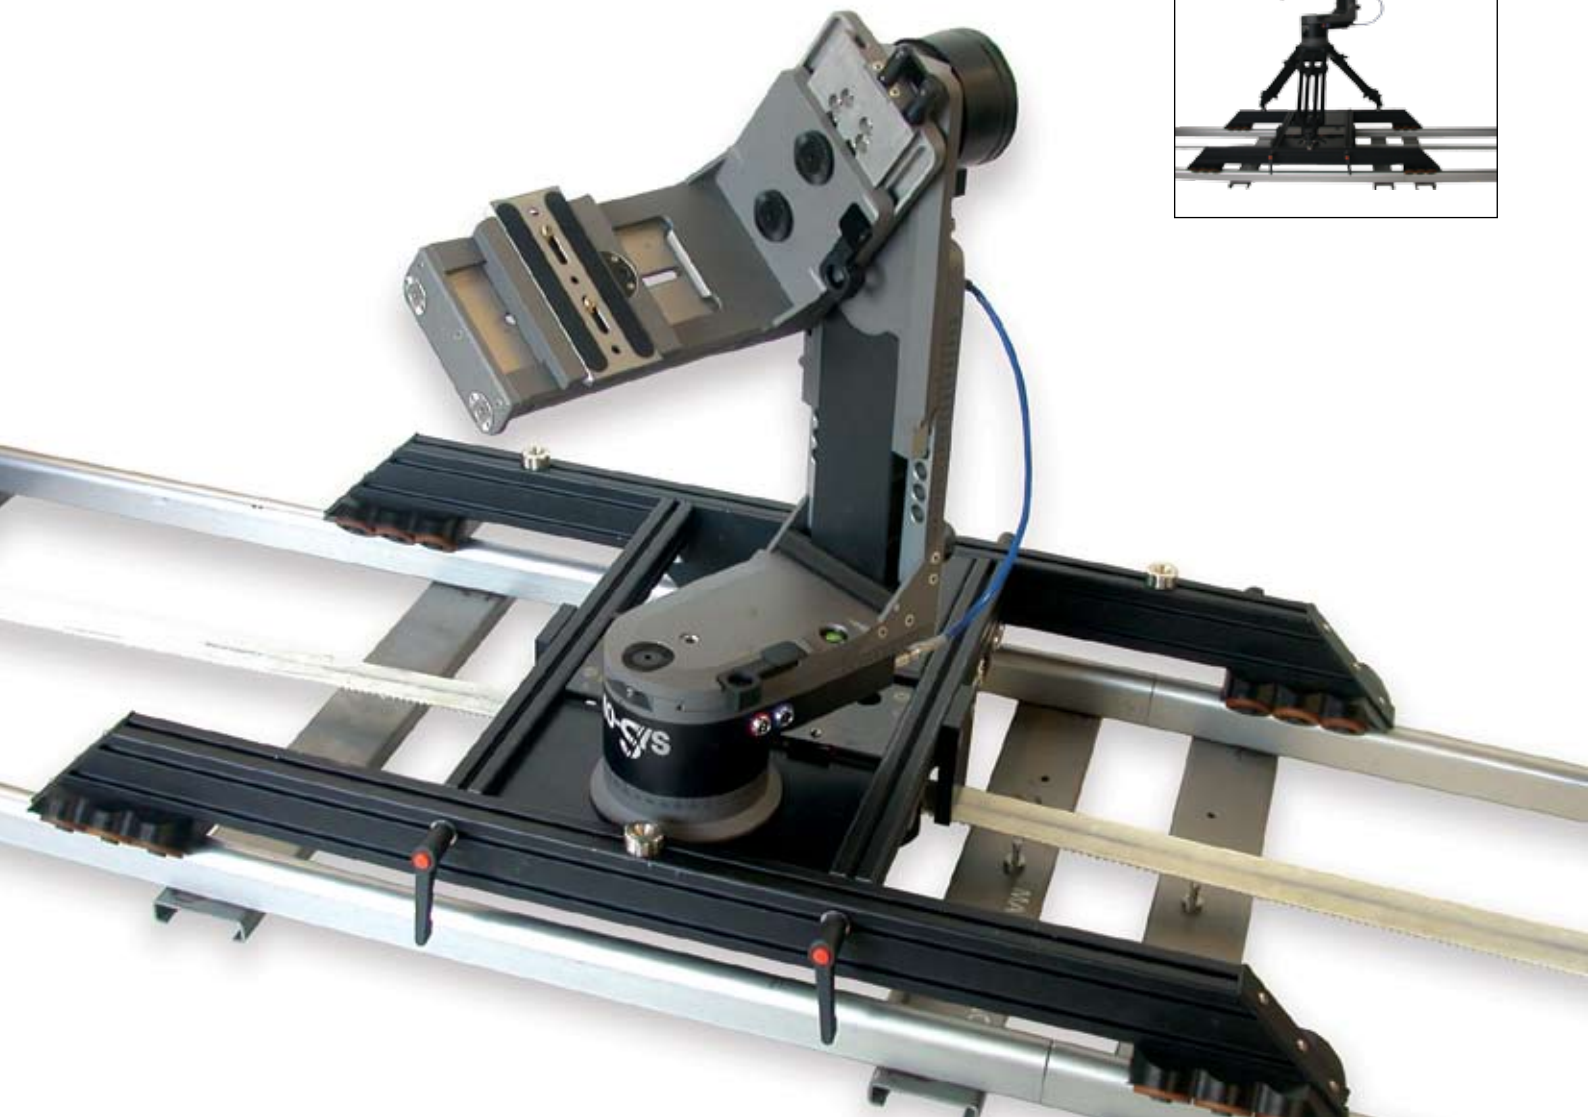

The Mo-Sys Motion Control System offers extreme precision control and can be synchronised to most film and video cameras (including HD) enabling frame accurate repetition. The system is modular and offers a variety of configurations. It is battery powered and easily transportable.

- Easy-to-use interface
- Frame-accurate motion control tailored for film making
- Multiple axes recording - Pan, Tilt, Track, Focus, Iris and Zoom
- Moves save to a laptop for future use allowing for easy location change
- Stable memory even if power fails
- Only one Motion Control Operator required
- Easily transportable
- Use with standard dolly track
- Time lapse and animation modes
- Design or export moves to Maya™ and other 3D programs
- Training for an operator on long shoots available
- Camera crew contribute their usual roles duringz operation

Lens & Camera Control

Various Mounting Options

Mo-Sys Lambda Digital Remote Head

With powerful integrated motors and high-resolution digital encoders, the Mo-Sys Remote Head provides the instantaneous feel of direct drive and smooth operation.

- Precise, responsive, reliable and zero backlash
- Quick-and-easy 'plug-in and play' set-up
- Easy-to-follow touch screen control
- Carries up to 50kg of camera
- 360 degree tilt
- Unrivalled ease of adjustment
- No need for camera balancing
- Simple cabling using daisy chain bus
- Can be under-slung
- Move your lens closer to the floor than a geared head with add-on motors

The Mo-Sys Principle

Enjoy the benefits of an easily upgradeable system

We continue to keep our current products compatible with other newly-developed Mo-Sys products and at the cutting edge of film-making technology. Mo-Sys has supplied equipment for film production companies including Disney, Warner Brothers and the BBC.

Custom projects such as turntables.
